- Kidney stones formation.
- Renal dysfunction.
- Drop in feed consumption.
- Decreased egg-laying.
- Mortality (hens and chickens).
- White or purplish crest.
- White legs.
- Abnormal behaviour in chicken after 26 days.

### PRONAT® BENEFITS

Specially designed for high-vitamin content on a beer yeast substrate. A well-adapted formula for animals based on methionine, sorbitol, choline and betain.

**Sorbitol** stimulates the secretion of digestive hormones and especially those that trigger contraction of the gallbladder and those that regulate the secretions of pancreatic enzymes.

**Choline** is involved in and speeds up the metabolic breakdown of fatty acids in the liver. It plays an essential role in hepatic metabolism since it prevents fat buildup and thus limit the appearance of fatty liver. Its need is increased in the case of high energy density diets (laying hens and chickens).

**Betain** is a choline metabolite in a form quickly used by the body.

**Betain and acetyl methionine** act as lipotropic agents.

### INGREDIENTS

Vitamin D3	Betain	Torula yeast
Vitamin B5	D.L Methionine	Sepiolite
Niacin	Biotin	Oyster shell powder
Choline Chloride	Sorbitol	<b>Plant extracts</b>

### INSTRUCTIONS

#### Laying hen

2.5 kg per ton of feed for 8 days

#### Chicken

1.5 kg per ton of feed for 5 days

**Does not require any withdrawal before slaughter.**
